

Instructions Matching Game

Our game is called the “matching game”. In this game, you will be playing many times. Each time, you will be playing in groups of 3. The computer will decide with whom you play and you will not know who that is.

If you are player 1, you will see a screen like this.

[SLIDE 1]

At the top of the screen, it tells you are player 1. There are 3 large grey pictures on the screen. Yours is the darkest. On this picture, you can read “YOU ARE Player 1”. There are 3 objects on this picture. Each object is a colored shape that is marked with a letter. Shapes, colors and letters are all different. You have to select one object by clicking on it and pressing OK.

On your screen, you can also see the objects on Player 2’s picture and the objects on Player 3’s picture. There is also one object outside the 3 pictures.

If you are Player 2, you will see a screen like this.

[SLIDE 2]

This is the same screen as for Player 1 except that your picture is the darkest one in the middle where you can read “YOU ARE Player 2”.

If you are Player 3, you will see a screen like this.

[SLIDE 3]

Again, this is the same screen as for Players 1 and 2 except that your picture is the darkest one in the middle where you can read “YOU ARE Player 3”.

All right, now, how do you obtain points?

[SLIDE 4]

In this game Player 1 has to choose an object that has something in common with the object Player 2 chooses. The arrow between the picture of Players- 1 and 2 tells you what they need to have in common. In this example, Player 1 needs to choose an object that has the same letter as the object chosen by Player 2.

Now what about Player 2?

[SLIDE 5]

Player 2 has to choose an object that has something in common with the object that Player 3 chooses. The arrow between the picture of Players 2 and 3 tells you what they need to have in common. In this example, Player 2 needs to choose an object that has the same color as the object chosen by Player 1.

What about Player 3?

[SLIDE 6]

Player 3 has to choose an object that has something in common with the object that is outside the pictures. In that example Player 3 needs to choose an object that has the same shape as the object outside the pictures.

Each time you play, you will know what each player needs to do to win because you all see the same screen. However, when you make a choice, you do not know what objects the others have chosen. If you choose the object that matches what you are asked to match, 40 points will be added to your wallet. If you miss, only 20 points will be added.

Is it clear for everyone?

Remember, you will play several times. Sometimes you will be player 1, sometimes you will be player 2 and sometimes you will be player 3. Each time you play, you will play with different people. Also, the shapes, colors, letter and characteristics that you need to match will change. We will not tell you how much you earned each time you played. We will only tell you how many points you have earned in total at the end of the game.

Everybody understands? Let's answer some questions, just to make sure everybody understands. Look at the screen here.

[SLIDE 7]

On your computers are some questions that you have to answer correctly before we start the game. If you need help with the questions, raise your hand and we will come to assist you.

Are you ready to start the game? Remember, you will play several times, always with different partners. The roles, the objects and what you need to match will change. We will tell you at the end how many points you obtained.

Instructions for The owl and the frog

Our second game is called the ‘the owl and the frog’. In this game, you will be playing many times. Each time, you will be playing with one other student in the room. The computer will decide with whom you play, you will not know who that is, and this is not the point to know.

In this game, you can be the frog or the owl. If you are the frog, you will see a screen like this.

[SLIDE 1]

At the top of the screen, it tells you are the frog. There are 2 large carpets on the screen. Yours is the one that shows you, the frog. You have 3 objects on the carpet. Each object is a colored shape. The objects are all different. You have to pick one object by tapping on it and pressing OK.

On your screen, you can also see the carpet of the owl and their objects. There is also one object outside the carpets.

If you are the owl, you will see a screen like this.

[SLIDE 2]

This is the same screen as for the frog except that your carpet is here and it shows you, the owl.

All right, now, how do you obtain points?

[SLIDE 3]

In this game, the frog has to pick an object that has something in common with the object the owl picks. The arrow between the two carpets tells you what the objects need to have in common. In this example, the frog needs to choose an object that has the same shape as the object chosen by the owl.

Now what about the owl?

[SLIDE 4]

The owl has to choose an object that has something in common with the object that is outside the carpets. In that example, the owl needs to choose an object that has the same color as the object outside the carpets.

If you choose the object that matches what you are asked to match, you will get 2 points. If you miss, you will get only 1 point. In this game, you always know what you have to match and what your partner has to match. But, you both make your choices secretly.

Is it clear for everyone?

[SLIDE 5]

Let's look at another example to make sure everyone understood. In this picture,

- 1- Are you the frog or the owl?
- 2- What are your objects?
- 3- What do you need to match?
- 4- What does the other player need to match?
- 5- If the owl picks the blue square, what does the frog needs to pick to win?

All right. You will play several times. Sometimes you will be the frog and sometimes you will be the owl. Each time you play, you will play with a different partner. Also, the objects will change and what you have to match will also change.

We will tell you how much you earned in total at the end of the game.
