Description of the variables

The file compiles the raw data generated by the software Multistage. One file was generated for each experimental session. This raw data compiled file was used to generate all processed datasets necessary to produce our results, graphs and tables.

Location: school campus id

Group: session id (10 to 12 subjects participated in a each session)

clientId: participant's id (randomly selected by software) within a session

Choice set: task id (these refer to the 4 tasks described in the text)

Gender: M for male and F for female

Older siblings: number of older siblings of the participant

Younger siblings: number of younger siblings of the participant

Payoff: payoff (in tokens) obtained in that round

choiceSelf: tokens allocated to self (among the choices in the task)

choiceOther: tokens allocated to other (among the choices in the task)

choiceTime: reaction time between onset of stimulus until choice was made

click.0.index: id of the box that was opened first

click.1.index: id of the box that was opened second

…
click.5.index: id of the box that was opened last

(there are only 6 boxes, numbered from 0 to 5)
